INTRODUCTION

Background

The National Security Management (NSM) course provides the basic curricula of the National War College and the Industrial College of the Armed Forces through correspondence programs. The programs of these two senior colleges emphasize national security policy formulation, military strategy development, mobilization, management of resources for national security, and planning for joint and combined operations. Instruction for the NSM programs is through a series of Blue Books including both textbooks and anthologies.

This Handbook provides information on the content of the programs, unit objectives, and guidance for students enrolled in either the individual correspondence mode or a seminar. It attempts to anticipate your questions and provide instructions and procedures that will facilitate your advancement through the program. Nevertheless, communications by mail or telephone may be necessary if unanticipated problems arise.

Persons who are enrolled individually are in Correspondence Program 701. Those in the accelerated seminar program who complete the requirements in approximately one year are in Correspondence Program 711. Seminar enrollees in the two-year program are in Correspondence Program 721.

Communications with the University

The Operations and Support Division of the External Programs Directorate is the administrative point of contact for students with the National Defense University (NDU). If you have questions about enrollment,

shipment or processing of course materials, examinations or the research report, test results, reserve retirement points, student progress, time extensions, or course completion certificates, write or call the Operations and Support Division, (202) 475-2011 or Autovon 335-2011.

Communications relating to academic concerns such as curriculum, subject matter, or evaluation procedures should be addressed to the Academic Adviser, (202) 475-1850 or Autovon 335-1850. Questions pertaining to general administration and policies concerning the seminar study program should be directed to the Seminar Program Adviser, (202) 475-1850 or Autovon 335-1850. For the convenience of the NDU staff, and to ensure that nothing is misplaced or mishandled, include your Social Security number with all written correspondence.

Address written communication to:

President
National Defense University
ATTN: NDU-EPD (and position of addressee, if known)
Fort Lesley J. McNair
Washington, D.C. 20319-6000

Normal duty hours are from 0800-1630 (Eastern time), Monday through Friday. Should you encounter any course-related problems and can only contact us during nonduty hours, please call the Operations and Support Division and record your message. After dialing the telephone number wait for the signal and state your name, social security number, and your message as briefly as possible. A correspondence course staff member will respond by telephone or letter, as appropriate.

Enrollment and Shipment of Materials

Upon registration, we will send you written confirmation of enrollment in the program. The course materials for Units I and II will be mailed together. You may anticipate receiving these within 30 days. Your enrollment date (the date on your acceptance letter) establishes your completion schedule. You will have 90 days from that date to complete the first unit. If you do not take the Unit I examination within that period, and neglect to apply for an extension, you may be disenrolled from the course.

When you have completed the Unit I examination and have mailed it to the University, proceed with the next unit. Your examination results will be sent to you. The materials needed to complete Units III and IV will be shipped in sufficient time for you to continue the program without interruption. A packing inventory will accompany the shipment of instructional materials and examination for each unit. **DO NOT OPEN THE EXAMINATION PACKET.** The shipment for Units I and II also contains a Style Manual listing topic areas for your research paper. Please check and immediately confirm the shipment inventory when you receive it.

Detailed administrative instructions follow in part III. It is mandatory that you comply with them.

II

CURRICULUM AND REQUIREMENTS

Curriculum Overview

The program comprises four units, each concluding with an objective-type test. A written research report is required as part of Unit III. The subject matter in the individual books progresses logically, but the titles of the four units are more arbitrary. The four-unit arrangement is merely a convenience for administering the program.

Unit I: The Environment of National Security

This unit describes the international and domestic environment of U.S. national security policies. It studies organizations and influences affecting the behavior of the United States as a leader in the community of nations. The readings provide a conceptual framework for the study and analysis of the contemporary international political environment. The discussions of concepts such as nationalism and modernization contribute to an understanding of nation-building and international relations. Another part of the unit focuses on specific areas and critical issues of major importance to our foreign policy and national security. Readings on economic theories, policies, and issues as they apply to the United States address the problems of providing adequate resources for defense, meaningful employment, and personal economic security. Discussions on the position of the United States in the world economy examine organizations and influences that have contributed to fundamental changes in the postwar economic order and the reduction in U.S. hegemony. The material on the American political

system contributes to an understanding of the domestic influences affecting our policymaking and our Nation's conduct in world affairs. This unit provides the institutional setting for political and economic issues studied later in more depth.

Unit I Objectives:

1. To recognize basic institutions and forces shaping international politics.

2. To appreciate the role of the United States as a world actor.

3. To understand the most important problems and issues in adequately providing for the Nation's security.

4. To understand national economic theories and policies essential to maintaining a viable economy.

5. To examine the role of the United States in the international economy and to appreciate the extent of U.S. dependency.

6. To understand the significance of the domestic political system for U.S. national security.

Unit II: Resources for Defense

Resources for the Nation's economic development and for national security purposes, long taken for granted, are the main themes in Unit II. Human resources, the most important element of the Nation's strength, are addressed in a later unit. The discussion of major natural and energy resources examines their availability and importance for national security, the role of government in their exploitation and conservation, and the problem of their availability in time of emergency. Although industrial production is still a major pillar of

the economy, in recent years American industry has lost much of its competitiveness to foreign producers; this unit examines the development of American industry, the role of government in industry, and industry's importance to national security.

The vast air and surface transportation network of the United States represents a vital asset not only for the economic health of the Nation but also for its security. This unit describes the role of government and the private sector in the development of each of the major transportation modes. It also points out the need for policies to improve productivity and the balance between modes.

The material on science and technology underlines the profound impact technological advancement has had on society in general and on the United States in particular. Technology is a key element in efforts of the United States to maintain a favorable position in the world military balance.

Unit II Objectives:

1. To become familiar with the principal natural and energy resources available to the United States and to understand any adjustments necessary to cope with the changing status of resources and with increased dependence on foreign sources.

2. To examine the development and role of U.S. industry and to understand the problems that the United States faces from foreign competitors and in maintaining an industrial base to meet defense needs.

3. To study development of the various transportation systems and the problems confronting government and private sector transportation officials today.

4. To understand the role of technology in the development of society and its importance to the U.S. economy and national security.

Unit III: Defense Decisionmaking

As the leader of the Western world in its effort to contain communist expansion, the United States has developed the necessary institutions and policies to fulfill its responsibilities for security. A broad spectrum of instruments of national policy--political, economic, psychological, and military--are available. Over the past three decades U.S. leaders have attempted to coordinate all of these instruments to achieve national objectives and thus have drawn domestic policies, foreign policy, and national security closer together. The threat from the Soviet Union and others has called for decisions on major problems on a continuing basis. Specific challenges such as the Berlin blockade in the late 1940s, the Cuban missile crisis of 1962, and the Arab-Israeli War of 1973 underscored the need for command and control mechanisms to cope with the problems of crisis management. A case study included in this unit examines presidential decisionmaking in the Cuban missile crisis.

On the domestic scene, particularly since the mid-1960s, policymakers have had to give greater attention to economic aspects of military readiness and the related demand for resources. Inflation, rising costs of defense systems, and the competition for resources for

income-security purposes and welfare have put a squeeze on the defense budget and intensified efforts to define requirements and to find the most cost-effective approach in the use of resources.

In addition to the subject areas outlined above, Unit III addresses the defense organization that has developed to direct and operate the Nation's military forces, the strategy for employing military power, the problems of centralized control and integration of the forces, and the various organizational arrangements to meet changing needs.

Unit III Objectives:

1. To examine institutions and processes involved in national security policymaking and decisionmaking.

2. To recognize the economic factors that bear on the availability and use of resources for defense.

3. To understand the planning, programming, and budgeting processes that determine defense requirements and that enter into resource allocation decisions.

4. To be familiar with the general analytical approaches used to promote efficiency in using defense resources.

5. To understand the organizational arrangements and systems for managing the Department of Defense, the roles of key officials concerned with national security, the responsibilities of the various elements of the Armed Forces, and the system for providing direction to them.

6. To understand the military strategy for possible employment of armed force to achieve national objectives.

Unit IV: Executive Management

The major themes in this unit include the human-resource and managerial dimensions of national security, systems acquisition and logistics, and preparedness and mobilization. The importance of effective management of human resources has gained increasing attention as the United States has sought to regain its competitiveness and strengthen its position as a world power. The unit discusses the tasks of managers and the techniques and tools available to them. It assesses quantitative and qualitative factors relating to the work force, with particular emphasis on manpower for defense. Acquisition of weapons and management of logistics pose difficult challenges for defense managers because of the complexity and costliness of defense systems. The requirement for logistics support has been complicated by ever-widening geographical deployments to meet threats and especially increased Soviet capabilities for power projection. Another part of the unit analyzes U.S. preparedness issues and mobilization planning with particular emphasis on the industrial base.

Unit IV Objectives:

1. To understand the function of management and the techniques and tools available to managers in bringing the factors of production together for efficient operations.

2. To examine the system for acquisition of major defense systems and the problems and issues managers face in obtaining reliable equipment in a cost-effective manner.

3. To be familiar with major problems and issues confronting defense logisticians.

4. To recognize demographic factors affecting the availability of U.S. manpower, and to be familiar with the particular problems of fulfilling defense human resource needs.

Research Report

Each student must write a narrative essay of 3,000 to 3,500 words, meeting the standards outlined in the Style Manual. (Also, see "Research Report" in the following section.)

In the introductory part of your essay you should clearly explain the scope of the paper--what you are attempting to do and what questions you will answer. Be specific. State your research question, if possible. For example, "this report will state and evaluate the pros and cons of the deregulation of scheduled air line passenger transportation in the period 1978-198-, state the Federal interest, and make policy recommendations concerning the role of the Federal Government based on evidence presented in the report." Avoid a broad and general statement of your objective such as "this report will examine the relation of economics to national security." In your research, first set down the main points of questions to be covered, and then the supporting data for each of these points, before proceeding to the main body of the essay. The essay should conclude with your answers or recommendations, based on the evidence developed in response to the earlier questions.

The research report must be your own work. Short quotations or passages cited to support your points are acceptable, but they must be

properly documented. In keeping with University standards you must uphold the highest degree of integrity as in all other phases of your work in the course.

In evaluating your work, the External Programs Directorate staff will consider these factors:

Organization (15 percent of grade)

Is the organizational pattern clear and appropriate to the subject?

Do the main parts of the report progress in logical sequence?

Has the organization been designed to make the presentation as logical as possible (or have ideas been fitted into a stereotyped format such as that of a military staff paper without particular concern for making the most convincing case)?

Content: Accuracy and Detail (15 percent of grade)

Have you clearly stated the main points?

Is the support material accurate, relevant, and sufficient?

Are there specific data and information to support the main points?

Content: Selection of Data (15 percent of grade)

Are the data pertinent to the main points?

Are the data and information from recognized authorities and sources?

Analysis: Quality and Completeness (30 percent of grade)

Is each main point adequately developed and supported by evidence?

Is the relation of the parts of the problem to the whole examined methodically?

Are the main points easily identified and arranged in logical sequence?

Is the reasoning logical and valid?

Do the conclusions and recommendations follow logically (or do they beg the question by stating truisms or unsupported generalities)?

Narration and Clarity (25 percent of grade)

Is your writing clear, precise, and readable?

Does your paper convey the impression that it contains your own thinking and not a compilation of other people's ideas?

Does the topic sentence of each paragraph describe the central idea in the paragraph?

Do other sentences in the paragraph support this topic sentence?

Are the transitions from topic to topic, paragraph to paragraph, and sentence to sentence adequate?

Are the sentences clear and direct?

In general, is the text written in the active voice?

Is the paper free of errors in spelling and punctuation?

Is the paper neat and free of unsightly erasures and corrections?

Overall Criteria

The Research Report as a whole and each of its parts are considered on the basis of completeness, balance, cohesiveness, currency, and presentation. Evaluators will consider the following:

Are the really important topics in the field covered?

Is appropriate emphasis placed on all topics?

Do the parts form a unified whole?

Is the presentation well-organized, logical, and clear to the nonspecialist?

III

ADMINISTRATIVE PROCEDURES

The Unit Examination

Closed-book, multiple-choice examinations must be taken on Units I, II, III, and IV at designated testing facilities. Examinations may vary in length from 50 to 70 questions and normally require two hours for completion. There is no time limit.

The examinations are designed to test knowledge and comprehension of the main ideas of the written materials. The multiple-choice questions offer alternative answers, some or all of which may have merit. Study the questions to determine what is expected or required, eliminate the alternatives having the least merit, and select the one best answer. (Sample questions are on page 24.)

When you are ready to take a unit examination, contact one of the testing facilities listed in the appendix to this booklet, or another facility approved for use by the military Services (e.g., DANTES, AFEES, USAR schools, Reserve or National Guard units). Coordinate the date and time for the examination with the facility prior to testing. The administering official will be the installation education and/or training officer, a designated representative, or a test control officer. You should understand that the testing facilities cooperate voluntarily in the administration of NSM examinations and may not always be able to accommodate your choice of time if it conflicts with their primary programs.

The sealed unit examination packets are shipped together with the course materials. You must ensure that the packets are opened only by the test control authority at the time the examination is taken. You will not be allowed to take the test if the packet has been opened prior to receipt at the test control facility. The test control official has been instructed to return the test material to the National Defense University immediately if the packet has been opened. (You must then take an alternate examination.)

You should take the following items with you to the testing facility:

Appropriate unit examination packet, unopened.

Two number-two (medium) pencils.

NOTE: No other material--textbooks, study guides, or notes--may be used in any way while taking the examination.

Before taking the test, fill in the required administrative information on the answer sheet in accordance with the instructions in the examination booklet. Upon completing the examination, ensure that the test control authority completes the affidavit inclosed in the packet or as specified on the answer sheet. The test control authority should immediately forward the examination booklet, answer sheet, and affidavit to the NDU Operations and Support Division.

Research Report

To meet the requirement of submitting a research report of 3,000 to 3,500 words within 90 days after completing the Unit III examination, you should follow the procedures below. (The computer identifies the objective examination as III A, the research report as III B.) Using the

list of topic areas in Section I of the Style Manual, develop a title for your report before you take the examination for Unit I. When you take the test for Unit I, write the title or number of the topic, taken from the Style Manual, in the space provided on the last page. Be sure that you have printed your name legibly on this page as well. Failure to submit your research topic will delay the grading of Unit I. If the subject area you have chosen falls within the list in the Style Manual, you may proceed; you do not need approval from the University.

Most of the topic areas listed are too broad to be covered adequately in 3,000 to 3,500 words. You should therefore narrow your topic, for example selecting "Deregulation of the Trucking Industry" as a facet of "The Proper Role of Government in the Regulation of Transportation Industries." Furthermore, your topic should relate to national security, be written with a national or Department of Defense focus, and pitched at the level of the Blue Books. Parochial Service, highly localized, or extremely technical subjects are not acceptable research themes.

You must have permission from the Academic Adviser (202-475-1850 or AV 335-1850) to write on a topic area not included in the list in the Style Manual. In such a case, prepare a working outline of your proposed research topic with your name on it and attach it to the Unit I examination. You will be notified in writing whether your proposed topic is accepted by the University.

You should mail the original and one copy of your completed research report directly to: President, National Defense University, ATTN: NDU-EPD-OS, Fort Lesley J. McNair, Washington, D.C. 20319-6000.

Research reports will not be returned to the student after evaluation. Outstanding reports will be retained for reference at the University and some may be recommended for publication, after contact with the authors.

Evaluation

The multiple-choice objective examinations are machine scored at the University. Your raw score on an examination will be compared to test-group unit scores which establish an adjusted percentage score for the examination.

Research reports will be evaluated by NDU faculty members and assigned a percentage grade. The overall course grade will be the average of the final grade for each unit and the grade on the research report.

You should receive the results of your examinations and research report by mail within three weeks after submission. If you have not received results within that time, contact the testing facility to ensure that testing material was mailed to the National Defense University; then notify the Operations and Support Division.

Included in the letter advising you of your test results, you will find a listing of topics relating to questions missed that are recommended for additional study and research. These topic numbers do not directly reflect questions missed, but rather a subject area in which you were deficient.

A grade of 70 percent or more is required to complete each objective examination and the research paper satisfactorily. Should you

not receive a passing grade, you will be given the option to retake a make-up objective examination or to rework the research report if requested within 30 days after you receive your grade. The final grade recorded will be the retest score. Should your retest grade also be unsatisfactory, you may still elect to proceed with the course. The grades on other units may be high enough to result in an overall satisfactory passing grade for the course. Any student whose record contains a 69 or below for any of the four units or research paper will be ineligible for an outstanding rating at the end of the course. An individual who receives a passing grade (70 or above) on an examination or research report may not take the examination again or submit a revised or new research report to improve his grade. Inactive duty officer retirement point credit will not be recommended for a failed objective examination or research report. Students who fail two examinations (objective or research report) may be disenrolled.

The Seminar Program

The NSM correspondence program may be accomplished in a seminar setting. This method of study is preferred because the intellectual exchange of opinions, knowledge, and experiences of the participants, the instructional presentations by students and guest speakers, and the use of audiovisual aids all serve to enrich the curriculum and increase the educational value of the program. The University recommends this program because it more closely parallels the mode of instruction in the resident programs and helps to provide stimulus for completion of the course on schedule.

The curriculum and instructional materials for the seminar program are identical to those of the individual correspondence program. The principal difference is that seminar students are guided through the program by a Seminar Director. The seminar program is more demanding because the student must complete all the course work required of the correspondence student plus: (1) attend and participate in at least 80 percent of the seminars; (2) make one or more formal presentations and on occasion conduct the discussion portion of the seminar; and (3) participate in other activities as required by the Seminar Director.

Seminar Students

Seminar students may transfer to the independent correspondence mode of instruction at any time. Independent or new students may join a seminar in Unit I or Unit III. All seminar applications must be coordinated with the Seminar Director. Be sure to keep the Operations and Support Division, NDU-EPD, Fort Lesley J. McNair, Washington, D.C. 20319-6000, informed of your current status and address. This is especially important for nonactive duty officers wishing retirement points.

The Seminar Director

To assure the presence of the best qualified senior officers to direct the seminar programs, the National Defense University appoints the seminar directors. This appointment is based upon the applicant's military and civilian education and experience; completion of the NSM course is required. The director should have a bachelor's degree and appropriate educational or instructional experience.

To apply for appointment as director, forward a request with a biographical sketch to the National Defense University, NDU-EPD-CP,

Fort Lesley J. McNair, Washington, D.C. 20319-6000. The sketch should include military and civilian education, military assignments for the last 10 years, educational and instructional experience, civilian vocational experience, and other information considered pertinent to certification.

Completion Schedule

The required schedule for completion of each unit for independent students not in a seminar follows:

CORRESPONDENCE PROGRAM 701

Unit	CONUS Students	Overseas Students
I	120 days	150 days
II	90 days	120 days
III A	90 days	120 days
Research report (III B)	90 days	120 days
IV	90 days	120 days
	480 days (16 months)	630 days (21 months)

As noted, students who reside overseas are allowed 30 additional days to complete each unit to cover additional mailing time. On the average, CONUS students need 16 months to complete the entire course, but some will complete it in less time. Course units must be completed within the established time limits. If you request sufficiently in advance of the due date for a unit, extensions of 30 days may be granted for any given unit, but no more than 90 cumulative days of extension will be granted for the entire course.

The last mailing includes an end-of-course survey for your comments on the course.

Students who fail to submit examinations and written work on time will be advised that they are delinquent. If no response is received at NDU within 30 days from the day of the warning letter, the student will be disenrolled. Students disenrolled for delinquency or academic deficiency will not be allowed to reenroll in the course for one year from the date of disenrollment. When compelling reasons other than delinquency or academic deficiency exist, and are submitted to NDU in writing, a student may withdraw voluntarily from the course for a period of four months to one year without prejudice. Credit for portions of the course completed prior to withdrawal may be awarded upon reenrollment, provided such reenrollment occurs <u>within one year</u> of withdrawal.

Correspondence Program 711 is usually completed on an accelerated schedule, taking approximately one year.

Correspondence Program 721 is usually completed in two academic years (September to June of each year). Seminar students should complete two units each year. The Seminar Director schedules the meetings to meet the requirements for preparation for examinations and to permit the writing of the research report.

Diploma

Students successfully completing the course will receive a diploma. If you request, a letter will be sent to your commanding officer or supervisor noting course completion. Students who achieve an overall <u>outstanding</u> course average (90-100) and have no final grades of 69 or below will graduate with the designation of <u>outstanding</u>. Students receive written confirmation of their achievement with notification of

course completion. Graduates will also be informed how to incorporate course completion into their official records.

Graduates may request that transcripts of their NSM record be forwarded to other academic institutions. Such requests should include full name, social security number, date of graduation, and the name and full address of the academic institution. The American Council on Education (ACE) has recommended graduate and undergraduate credit for course completion. The ACE recommendation will be forwarded with the diploma.

Reserve Component Retirement Points

The number of points recommended for each study method follows:

	Correspondence Program 701 (points)	Correspondence Programs 711 and 721* (points)
Unit I objective examination	24	30
Unit II objective examination	24	30
Unit III objective examination	24	30
Research report	24	30
Unit IV objective examination	24	30
	120	150

*Retirement points are awarded upon satisfactory completion of a unit of study. Seminar credit is awarded to the seminar student who satisfactorily participates in 80 percent of the scheduled seminars. If the student has not participated satisfactorily, the Director will so note this fact when submitting the examinations and the student will be awarded the same number of retirement points authorized for independent study.

Academic Integrity

The National Defense University expects its students to exemplify the highest standards of ethical conduct. The NSM course will provide you with opportunities to prove your academic integrity. Your examinations and research report must be your own work. This does not preclude having a report professionally typed or participation in discussion sessions concerning examinations, but you are expected to prepare your work without improper assistance from others.

Sample Questions: Unit Examinations

Text: National Economic Theories, Policies, and Issues (1981)

Since World War II, the ratio of our defense spending to the gross national product:

A - Has remained about the same.

B - Was lower in 1979 than in any other year.

C - Was higher in 1979 than in any other year.

D - Has fluctuated with no apparent trends.

Text: Transportation (1981)

The purpose of economic regulation of transportation is to:

A - Substitute regulation for market competition where circumstances do not permit competitive forces to operate normally.

B - Integrate the entire transportation network into a fully coordinated system.

C - Remove reliance on state and local governments and to concentrate transportation controls at the Federal level.

D - Decrease competition in order to increase efficiency and

the acceptance of innovations and technological advancements.

Text: Defense Economic Issues (1982)

Which of the following correctly describe(s) the economic price paid for worldwide increases in defense spending?

A - Military expenditures provide more jobs than equal levels of spending for civilian goods.

B - The general economic performance of countries with comparatively small military budgets has been poorer than those with considerably heavier military allocations.

C - Military expenditures are inherently inflationary since purchasing power is created without offsetting increases in consumable output.

D - All of the answers are correct.

Text: Production for Defense (1980)

A distinguishing and limiting characteristic of the defense market is that:

A - "Surge" capabilities remain constant thus producing stagnation within the industry.

B - Foreign military sale items have to be produced at fixed rates.

C - The industry and the Department of Defense must operate within an annual budget cycle.

D - The industry is homogeneous both horizontally and vertically and therefore lacks flexibility.

Other NSM Publications

In addition to this Handbook, the External Programs Directorate publishes the following with information on the National Security Management Course:
